

SECURITY SOLUTIONS

# TROY Security Supplies

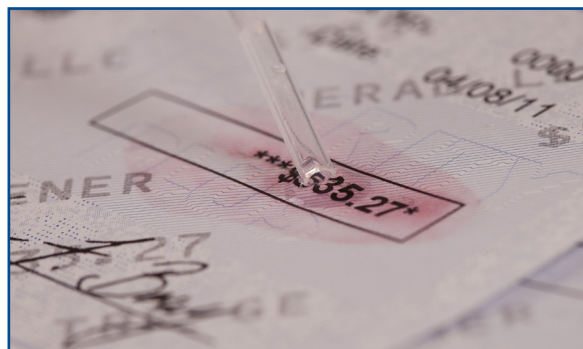

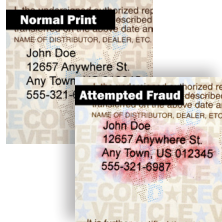

TROY toner solutions allow you to manage fraud, reduce operational risk, and comply with regulations related to protecting information privacy. Developed in an ISO 9001 certified facility, TROY toners are of the highest quality and offer specialized security for your documents.

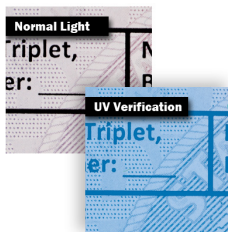

## TROY Toner

**TROY MICR Toner** is precision-matched to meet the print characteristics of each TROY printer model and are formulated according to worldwide banking standards, utilizing both E-13B and CMC-7 fonts. These MICR toner cartridges consistently meet or exceed the yield of OEM cartridges, providing customers with a low operating cost. These cartridges will not void the manufacturer's warranty and are recommended for use with TROY and HP LaserJet printers. TROY's MICR toner cartridges are backed by our Quality Guarantee.

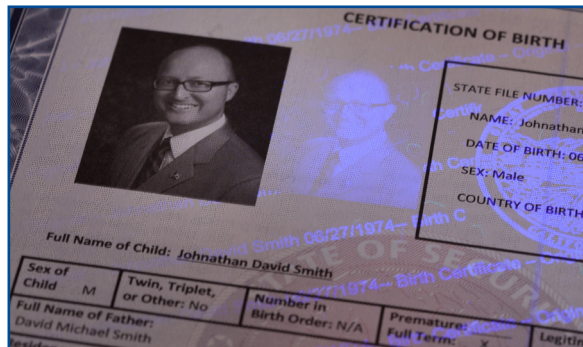

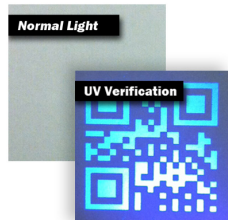

**TROY Security Toner and TROY MICR Toner Secure™** allow you to print as usual, but alerts you if your documents have been tampered with. When chemical alteration is attempted, the patented security agent forces a bright red stain to permeate through the document, protecting the printed words and graphics. TROY Security Toner adds a cost-effective layer of security to standard applications such as educational transcripts, medical records, legal documents, and more. TROY MICR Toner Secure is the benchmark in anti-fraud check printing.

**TROY MICR UV and TROY Standard UV** add a hidden layer of security to your high value documents. Undetectable to the naked eye, the images appear as standard black print; however, upon inspection under an ultraviolet (UV) light, they fluoresce blue. TROY MICR UV Toner provides a level of authentication easily verified by check processors. TROY Standard UV Toner provides an additional layer of security for your most important documents.

**TROY SecureUV** allows for the combination of visible and invisible ultraviolet (UV) elements to create customized and highly secure documents. These elements can be printed on paper or added to preprinted forms, providing a layer of document authentication and fraud deterrence. Any combination of graphics, text, or barcodes can be used for the creation of these customized, secure documents. SecureUV elements are printed simultaneously with standard visible print elements, but are invisible until placed under a UV light for verification.
